The Children of the World Need to be Vaccinated

The *Children* of the *Future* need to be *vaccinated!!!*

How can we help?

3 challenges:

1. **Access to immunization services**

1. **Child survival intervention through vaccines remains low. 50% of all cases of severe pneumonia can be prevented by Hib and Pneumonic vaccines. It is speculated that such vaccines could more easily administered than community-based management of pneumonia which reaches less than 20% of children. Better immunization coverage particularly in East and Southern Africa, is needed and could be achieved through a mix of interventions such as "nationwide packages."**

2. **Access to technology**

2. **Ensuring availability of vaccines in developing countries with weak infrastructure.**

3. **Ensuring financing**

3. **The cost of immunization is on the increase, and spending has recently doubled, especially to fund campaigning efforts. Certain countries cannot afford these expenditures.**

5 decisions:

1. **Vaccinating children early in life**
2. **Having a clean home and environment**
3. **More effectible house cleaners and utilities**
4. **Safer production and shipping of food and animals**
5. **Exterminate source of illnesses (insects, molds, chemicals, etc.)**

Donâ t let us cry anymore. We want to be saved!!!

Letâ s get on top of the real situations of the world!!

If we stand together anything can be done!!

We have the world in our hands, why are we squeezing it?
