# The Children of the World Need to be Vaccinated

*The Children of the Future need to be vaccinated!!!*

**How can we help?**

**3 challenges:**

**1. Access to immunization services**

**1. Child survival intervention through vaccines remains low. 50% of all cases of severe pneumonia can be prevented by Hib and Pneumonic vaccines. It is speculated that such vaccines could more easily administered than community-based management of pneumonia which reaches less than 20% of children. Better immunization coverage particularly in East and Southern Africa, is needed and could be achieved through a mix of interventions such as "nationwide packages."**

**2. Access to technology**

**2. Ensuring availability of vaccines in developing countries with weak infrastructure.**

**3. Ensuring financing**

**3. The cost of immunization is on the increase, and spending has recently doubled, especially to fund campaigning efforts. Certain countries cannot afford these expenditures.**

**5 decisions:**

**1. Vaccinating children early in life**

**2. Having a clean home and environment**

**3. More effectible house cleaners and utilities**

**4. Safer production and shipping of food and animals**

**5. Exterminate source of illnesses (insects, molds, chemicals, etc.)**

**Donâ t let us cry anymore. We want to be saved!!!**

**Letâ s get on top of the real situations of the world!!**

**If we stand together anything can be done!!**

The Children of the World Need to be Vaccinated

**We have the world in our hands, why are we squeezing it?**
