female masturbation - things you want to know

â MASTURBATION or SELF SEXâ when you think about this word or you read it anywhere, two more words come to your mind and those are a cock(penis) and a hand. because many of u think that its just a boys thing but thats not true, many girls also masturbate after all everybody have feelings, every body get horny, everybody loves sex.

masturbating for girls is not a quick or short process like boys just unzip your pants take out cock and stroke it till you ejaculate. girls like it doing very perfectly and with an intense feeling. i donâ t know if you are masturbating or not, but i guess you do.

How to do?

masturbating is a thing you always should do in private, everybody would love to see your pussy but you would not like to show. find a private place where ever you like, like your bedroom, bathroom, store room, or may be kitchen if no body is there.

take off your clothes depending on how horny you are, you can just take off your bottoms and panties and leave the top, or you can be complete naked.

the most common position for masturbation is lay down on your back, bent your legs and spread them wide open, and now you can touch your pussy(vagina) always remember to wash your hands before touching inside of your vagina because you can get infection if your hands are infected or dirty. start rubbing your labia(out side of pussy) feel the touch and the pleasure you can moan to make yourself more horny. use your fingers and brush up your pussy lips and a lil inside the pussy, do it more and more. there is a little part of your body just above your pussy hole that get erect when you feel hot and horny. that is called CLIT/CLITORIS , rub it, squeeze it play with it it will arouse you to achieve an orgasm, use your middle finger or fore finger and penetrate your pussy move your finger inside your pussy and keep it in and out, you can add more fingers as much as you can have soon you will feel your hole/pussy getting wet that will lubricate your pussy and you will feel more comfortable. fuck your pussy till you get wet and achieve and orgasm.during orgasm your eyes will be close and your moans will get louder and your whole body will be shaking and out of you control. many girls SQUIRT during orgasm and many not. Squirting is like menâ s ejaculation. During squirting a stream of vaginal juice comes out of your pussy. the quantity of vaginal juice could be a spoon or could be a full cup. women mostly starts squirting after that age of 19 and some women starts on their 40th birthday and some never experienced it in their whole life.

TRY SOMETHING NEW

above i told you just a simple technique to pleasure yourself but you can explore it adding more things like toys, devices, food, positions, and much more

comment and like to know more BOOKMARK me for more information in next part

sorry for writing this under stories as its not a story.
